

## **Cepsa advances in its commitment to sustainable mobility with a new range of lubricants for hybrid and electric vehicles**

- **The company continues to meet the new needs of its customers while contributing to the decarbonization of transportation, in line with Agenda 2030 and the Sustainable Development Goals.**
- **These products are marketed in packaging made from 30% recycled plastic and have high durability, reducing waste generation and contributing to increasing their life cycle.**
- **In addition, the new XTAR range of lubricants for hybrid cars helps save fuel and reduce emissions.**

Cepsa, as part of its commitment to promoting sustainable mobility, has launched its new range of XTAR lubricants and fluids for hybrid and electric vehicles. The company has developed a wide range of products to meet the new requirements of this type of vehicles, designed to ensure their protection and prolong the good performance of their mechanisms.

Cepsa's Lubricants business, together with the company's Research Center, has designed a range of products with advanced technology and a low viscosity grade, favoring less friction in the engine and reducing fuel consumption, CO<sub>2</sub> emissions, and the emission of other polluting gases and particles (in the case of hybrid vehicles).

Niurka Sancho, Cepsa's Director of Lubricants, highlighted: "At Cepsa, we are committed to sustainable mobility and we promote it in many different areas. In this case, it is through the development of advanced lubricants and fluids that, thanks to our technical and innovative capabilities, not only meet all the needs of hybrid and electric vehicles, but also significantly reduce their environmental impact".

This new range of products is considered to be highly durable, reducing waste generation and contributing to increasing the life cycle of the products. In this regard, Cepsa's Lubricants business has been committed to sustainability for years through various initiatives, such as the use of 30% recycled plastic containers, the replacement of drums with reusable IBC containers, and the optimization of distribution logistics, which reduces the carbon footprint of their transportation.

Cepsa manufactures these products at its lubricants plant in San Roque, Cadiz, from where they are distributed to more than 80 countries. This new range will be available through the company's usual distribution channels, which include an extensive network of 1,800 service stations in Spain and Portugal, as well as specialized workshops and official distributors.

## **Towards a more sustainable and efficient mobility**

Cepsa is committed to the energy transition to accelerate decarbonization in transportation and the promotion of sustainable mobility. This new range of products enables the company to make a decisive contribution to the Sustainable Development Goals, specifically SDG 7 (affordable and clean energy) and SDG 13 (climate action), within the framework of Agenda 2030 and the fight against climate change.

Cepsa is working on a profound plan to turn all its businesses green and become a benchmark in the energy transition, in which renewable energies and sustainable mobility solutions will play a leading role. In this regard, the company has an important alliance with Endesa that creates a pioneering partnership between two major energy players. The alliance enables electric vehicle customers in Spain and Portugal to use both the public grid that Endesa X has already deployed and will continue to expand in all technologies, and the new ultra-fast charging network that Cepsa will begin to deploy this year. Both companies are working to develop what will be the largest ultra-fast on-the-go charging network in Spain and Portugal, with chargers that will enable customers to recharge 80% of their electric vehicle batteries in approximately 10 minutes.

**Cepsa** is a global energy and chemical company operating at every stage of the oil and gas value chain. Cepsa also manufactures products from plant-based raw materials and operates in the renewable energy sector. Cepsa has 90 years of experience and a team of over 10,000 employees, who combine technical excellence with adaptability. Cepsa operates on five continents.
